The "R2" option allows the LED/DRC board to be mounted externally/remotely from the suppressor. Typically, this option is used when the suppressor is mounted internal to a panel or gear. This allows for external monitoring of a suppressor that cannot be seen. This option is provided with six feet of wire external to the suppressor for connecting the LED/DRC board. The LED/DRC board is mounted in a small, plastic NEMA 1 enclosure to be mounted externally/remotely from the suppressor. It can be surface mounted on the outside of the panel or gear.
