

# Model: SILxM

**360 kA Per Phase\***  
**ANSI/UL 1449**

**A = Type 2 SPD, I<sub>n</sub> = 10 kA**

**B = Type 2 SPD, I<sub>n</sub> = 20 kA**

**C = Type 1 SPD, I<sub>n</sub> = 10 kA**

**D = Type 1 SPD, I<sub>n</sub> = 20 kA**

\* Based on 3 Phase Wye, 4 Wire and Ground  
 I<sub>n</sub> = Nominal Discharge Current per ANSI/UL 1449

## Key Features

- **Discrete “All Mode” Circuitry: Directly Connected Protection Elements in “All Modes” (10 modes for 3 phase Wye circuits) as recommended by ANSI/IEEE Std. 1100-2005**
- **Industry Leading Measured Limiting Voltage (let-through) Performance**
- **UL 1283 EMI/RFI Parallel Configured Voltage Responsive Circuitry Type 2 SPDs only**
- **Local & Remote Diagnostics**
- **Independent Verification of Performance and Safety**
- **No moving parts or springs - No mechanical or electro-mechanical thermal/over-current protection**
- **Component-Level, Thermal Fusing**
- **Patented Internal, Circuit Board Mounted, Over-Current Fusing**
- **25 Year Unlimited Free Replacement Warranty**

**Application:** The SILxM series was developed to answer a broad variety of demands from our customers. This device is robust enough to handle the punishment of service entrance applications while providing protection from transients that are generated inside the facility. The constant bombardment of this combination of transients can damage valuable equipment and waste budget dollars.

**ANSI/IEEE C62.41.1 & C62.41.2-2002 environments:** Suitable for Categories: A, B & C (Most Severe Electrical Environments)

**IEC Environments:** Suitable for use in IEC 61643-11 environments

**Circuit Topology:** Parallel configured **Voltage Responsive Circuitry** circuit design incorporating component-level, thermal fusing and circuit board mounted, **Patented** internal over-current fusing methodology with discrete **“All Mode”** protection (10 modes for 3 phase Wye units). All protection circuits are encapsulated in our high-dielectric compound to promote long component life and protection from the weather and vibration.

**Protection Modes:** Industry-best practice of true all mode dedicated protection components for all operational modes of the electrical system. **Discrete L-N, L-L (Normal Mode) and L-G, N-G (Common Mode)** Example: Directly Connected Protection Elements in All 10 modes for a 3 phase, 4 wire, Wye system, (i.e. 3 L-N modes, 3 L-L modes, 3 L-G modes and 1 N-G mode).

**Input Power:** 50-400 Hz (60 Hz nominal)

**Temperature Rating:** Up to 80°C

**Insertion Loss Data: (L-N)**

Frequency:	280 kHz	1 MHz	Max Attenuation & Freq.
Attenuation:	3 dB	17 dB	40 dB @ 483 kHz

**Standard Enclosure:** NEMA 12 rated, painted steel enclosure  
 (Other enclosure options available see pg. 2)

**Nominal Discharge Current (I<sub>n</sub>) Rating:** 10 kA (SILC, SILA), 20 kA (SILB, SILD\*\*) (\*\*Complies with the requirements of UL 96A Master Label for Installation Requirements for Lightning Protection Systems)

**Diagnostics:** Green LED's, one per phase, normally on. A wide range of optional diagnostics is available (see page two for details).

**Circuit Interrupt:** Internal component-level, thermal fusing and patented circuit board mounted, over-current fusing. No external over-current protection required. (Note: Installations using conduit external to the breaker panel require a 30A breaker per the NEC)

**Short Circuit Current Rating:** 200 kAIC

**Product Qualifications:**

Listed to ANSI/UL 1449 by UL (E340498), CSA (MC#241804); UL1283\* (\*Type 2 SPDs only)

**Measured Limiting Voltage (MLV) Test Parameters:** Positive polarity, Category A: Line power applied, Category C: No line power applied, Voltages are peak (±10%). Measured Limiting Voltages are measured from the insertion point on the sine wave to the peak of the surge for powered tests. Each MLV is the average of all phases within that mode of protection. To duplicate the results, the specified mode of protection must be tested in all phases (except N-G) and averaged together. (Individual mode or shot results may vary by more than 10%). *Scope Settings: Time Base = 10 microseconds per division, Sampling Rate = 2.5 Gigasamples/sec, Bandwidth = 400 MHz (200 MHz for Cat C), Probes: Tektronix P5100/P6015A. These settings help to assure MLV results are accurate.* **All tests performed with 6" lead length (external to the enclosure), simulating actual installed performance.** The MLVs reported above are certified by Third-Party, Independent Testing. Individual test reports are available upon request.

†The MLV reported for the Category C High, 10 kA 8/20 Current Driven Test is determined by measuring the MLV of one of the fifteen 10 kA impulses impressed through the SPD during the Nominal Discharge Current (In) Test from C62.62™-2010 and ANSI/UL 1449-2006. This is not the MLV recorded during the pre- and/or post-test 6 kV / 3 kA Combination Wave Test used to determine the VPR of the SPD. The VPRs are reported on page 1 of this specification.

\*Other voltage configurations may be available. Contact your sales representative for additional assistance.

Model Number Example: SILB3Y2D5M

Base Model:	SPD Type and Nominal Discharge Current (In) Rating:	Voltage Code:	Options:
