

## FMPST1KIT (ST1)

The "FMPST1KIT" allows the Surge Tracker ST1 series units to be installed flush with the drywall. Designed for installations with flush mount electrical panels, or anytime it is desired to have the SPD mounted completely level with the wall. The plate covers the area that was cut-out to install the suppressor. The FMPST1KIT includes the steel plate, 4 screws, and 4 wall anchors needed to mount the unit in drywall. The plate's bracket fits onto the hub of the unit and is secured via the locknut included with the unit.
